

Landingpage Tracking integrieren:

1. Die Datei "ROOT/themes/Frontend/Bare/frontend/detail/header.tpl" bearbeiten
2. Den folgenden Code direkt vor das letzte "{/block}" einkopieren:

```
<script>
(function soluteLandingTracking(){
  if (location.href.indexOf("soluteclid") < 0) return;
  localStorage.setItem("soluteclid", (new Date()).getTime()+" "+location.href);
  var url = "https://cmodul.solutenetwork.com/landing";
  url += "?url=" + encodeURIComponent(location.href);
  var req = new XMLHttpRequest();
  req.open("GET", url);
  req.send();
})();
</script>
```

Conversion Tracking integrieren:

1. Die Datei "ROOT/themes/Frontend/Bare/frontend/checkout/finish.tpl" bearbeiten
2. Den folgenden Code direkt nach "{include file="frontend/checkout/finish_footer.tpl}" einkopieren:

```
<script>
soluteConversionTracking({
  VALUE: "{$sAmountNet - $sBasket.sShippingcostsNet|round:2}",
  ORDER_ID: "{$sOrderNumber}",
  FACTOR: "1",
  CT: "Shopware5",
});
function soluteConversionTracking(data) {
  var ttl = 1000*60*60*24*30;
  var a = localStorage.getItem("soluteclid");
```

```
if (!a) return;
var b = a.split(" ", 2);
if (parseInt(b[0])+ttl > (new Date()).getTime()) {
var url = "https://cmodul.solutenetwork.com/conversion";
url += "?val=" + encodeURIComponent(data.VALUE);
url += "&oid=" + encodeURIComponent(data.ORDER_ID);
url += "&factor=" + encodeURIComponent(data.FACTOR);
url += "&url=" + encodeURIComponent(b[1]);
url += "&ctsystem=" + encodeURIComponent(data.CT);
var req = new XMLHttpRequest();
req.open("GET", url);
req.send();
} else {
localStorage.removeItem("soluteclid");
}
}
</script>
```

Achtung: Ohne das Landingpage Tracking funktioniert das Conversion Tracking nicht.
